

KloudInsight

Predictive Intelligence

KloudInsight is the core of Kloudspot's Situational Awareness and Intelligence Platform. Get a single-pane-of-glass view of every node on your network, from asset location to user activity. Analyze paths and hot spots in real time, or play it back. Take advantage of AI and Machine Learning aided predictive analytics for better workflow optimization. Your network, your control.

Performance Driven

Scalable and reliable, KloudInsight not only gives you a bird's eye view of all your premises, but also scales as your device count grows. In fact, the more devices you have connected, the more accurate your reports can get.

Intelligence

Intelligence is Kloudspot's MO, and KloudInsight exists at the core of our most advanced technologies. AI and Machine Learning are deployed at your most critical network nodes for optimum performance in predictive analytics, like knowing where future hotspots are or predicting crowd flows.

Multidimensional Awareness

Make the right first impression. Enable powerful narrowcasting campaigns based on visitor data or give a peace of mind with safe reopening indicators. Prepare to delight your users as they not only receive the most updated information, but interact with it.

Futureproof

KloudInsight runs on the Kloudspot Intelligent Platform, which evolves with your business needs. And as your premise and infrastructure changes, support for new technology standards are added constantly while reducing complexity.

Accurate Vision

Location, Location, Location. Brilliant insight often starts with seeing the whole picture – and KloudInsight is no different. Accurately triangulate users and their devices on your premise. Let us automate the work for you with rule triggers. Play it back at any time, or see potential future pathways on your dashboard.

**KloudInsight is the core of Kloudspot's Intelligent Platform
– to help your Digital Transformation.**

The Bigger Picture...

KloudInsight not only digests real time data, but also sees real time camera feeds. Our camera analytics service, KloudVision, can feed its data in real time to KloudInsight for applications such as PPE detection and contact tracing. Or, you can output customized dashboards from KloudInsight to our digital display solution, KloudDisplay.

Safety

We know how important safe reopening is for everyone. That's why we built KloudInsight not only for the most critical needs of today – such as PPE Detection and Capacity Limits – but also for the well-being of your users in the future. For example, KloudInsights can integrate with temperature scanners for additional peace of mind. Or, push surveys to users for health screening. Safety is always our top priority.

Privacy

Let's keep this one simple – only you will have control over your data. Kloudspot runs on the edge of your network and we don't have access to your logs. All of Kloudspot's analytics are encrypted with AES-256.
